

Microsoft Intune Device Management & Security Automation Lab

In this lab we assume a new employee is joining the company we need to setup the laptop with windows 11 to him, so we need to

1. Enroll device into Intune
2. Deploy Chrome automatically
3. Configure password policies
4. Enable BitLocker
5. Create compliance policies
6. Configure Windows Updates
7. Generate reports

So, what we will be building, cloud-managed Windows environment using Microsoft Intune:

- Enroll Windows 11 devices
- Configure compliance policies
- Deploy applications automatically
- Apply security baselines
- Configure Windows Update rings
- Implement BitLocker policies
- Create device configuration profiles
- Perform remote device actions

Skills Demonstrated

- Microsoft Intune
- Microsoft Entra ID
- Endpoint Management
- Device Compliance
- Conditional Access
- BitLocker Administration
- Windows Autopilot
- Application Deployment

- Microsoft 365 Administration

WINDOWS AUTOPILOT PART:

Step 1: Enable Automatic Intune Enrollment

The screenshot shows the Microsoft Intune admin center interface. The left sidebar contains navigation links: Home, Dashboard, All services, Explorer, Devices, Apps, Endpoint security, Agents, Reports, Users, Groups, Tenant administration, and Troubleshooting + support. The main content area is titled 'Microsoft Intune' and shows the 'Enrollment' settings for 'Microsoft Intune'. The settings are organized into sections for MDM and WIP (Windows Information Protection).

MDM Settings:

- MDM user scope: ☒ None ☐ Some ☐ All
- MDM terms of use URL: [Redacted]
- MDM discovery URL: [Redacted]
- Disable MDM enrollment when adding work or school account on Windows: ☒ Yes
- MDM compliance URL: [Redacted]
- Restore default MDM URLs: [Link]

WIP Settings:

- Windows Information Protection (WIP) user scope: ☒ None ☐ Some ☐ All
- WIP terms of use URL: [Redacted]
- WIP discovery URL: [Redacted]
- WIP compliance URL: [Redacted]
- Restore default WIP URLs: [Link]

Footer:

Creating new WIP without enrollment policies (WIP-ME) is no longer supported. For more information, see [Windows Information Protection](#).

Buttons: Save, Discard, Delete

Create Test User: Created Intune user and assigned him Microsoft 365 license

Home > Active Directory > Users & Groups > Add a user

Add a user

Active Directory > Users & Groups

Filter set: Computers

Display name: Adam

First name: Adam

Username: Miles

Display name: Test User

Set up the basics

To get started, fill out some basic information about who you're adding as a user.

First name: Intune Last name: User

Display name: Intune User

Username: intuneuser Domains: student567.onmicrosoft.com

☒ Automatically create a password

☒ Require this user to change their password when they first sign in

To Collect Hardware details run this commands on power shell:

Set-ExecutionPolicy Bypass -Scope Process

Install-Script Get-WindowsAutopilotInfo -Force

Get-WindowsAutopilotInfo -OutputFile C:\AutopilotHWID.csv

```
Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\Windows\system32> Set-ExecutionPolicy Bypass -Scope Process

Execution Policy Change
The execution policy helps protect you from scripts that you do not trust. Changing the execution policy might expose
you to the security risks described in the about_Execution_Policies help topic at
https://go.microsoft.com/fwlink/?LinkID=135170. Do you want to change the execution policy?
[Y] Yes [A] Yes to All [N] No [L] No to All [S] Suspend [?] Help (default is "N"): y
PS C:\Windows\system32> Install-Script Get-WindowsAutopilotInfo -Force

NuGet provider is required to continue
ShellGet: provider NuGet is not installed. To install the NuGet provider, run the command:
'Get-Module -Name NuGet -ListAvailable' or 'Install-Module -Name NuGet -Force'. You can also install the
provider by running the command: 'Import-Module -Name NuGet -Force'. To learn more about the NuGet provider, run
the command: 'Get-Help NuGetProvider'.
PS C:\Windows\system32> Get-WindowsAutopilotInfo -OutputFile C:\AutopilotHWID.csv
PS C:\Windows\system32>
```

A file will be created:

C:\AutopilotHWID.csv

Windows	6/8/2026 7:37 PM	File folder	
AutopilotHWID.csv	6/9/2026 5:53 PM	Microsoft Excel Com...	8 KB
vbs.txt	6/5/2026 11:09 AM	Text Document	1,266 KB

So, we need to upload the csv file to autopilot

Add Autopilot devices

Windows Autopilot devices

Import Windows Autopilot devices from a .CSV file. When assigning users in the .CSV, make sure that you are assigning correct UPNs. [Learn more about formatting requirements here.](#)

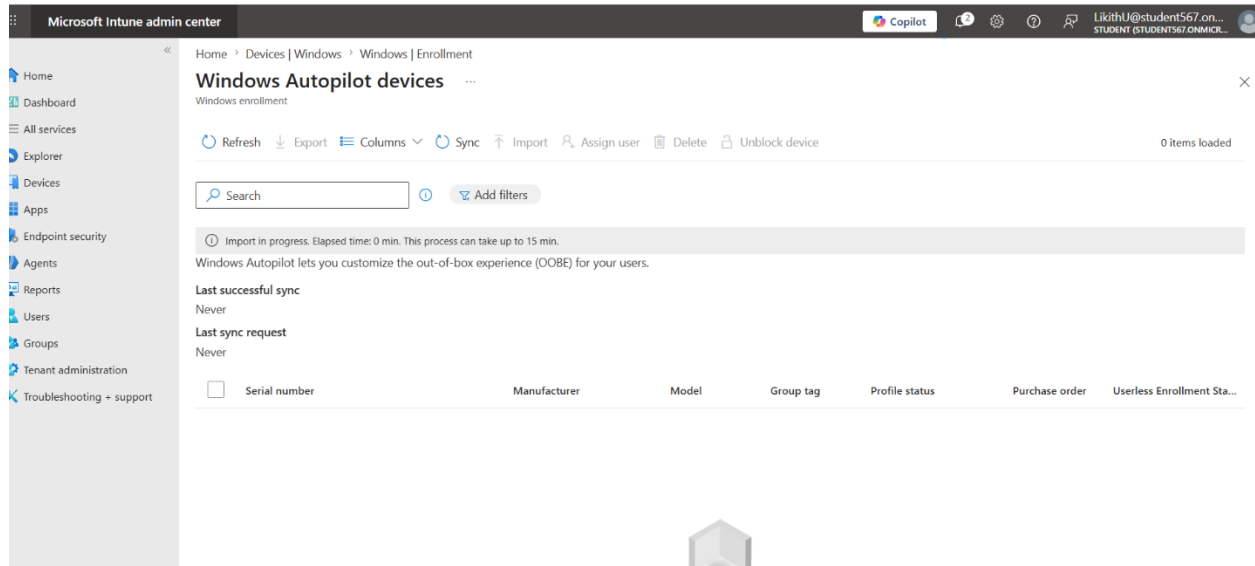

Specify the path to the list you want to import.

C:\AutopilotHWID.csv

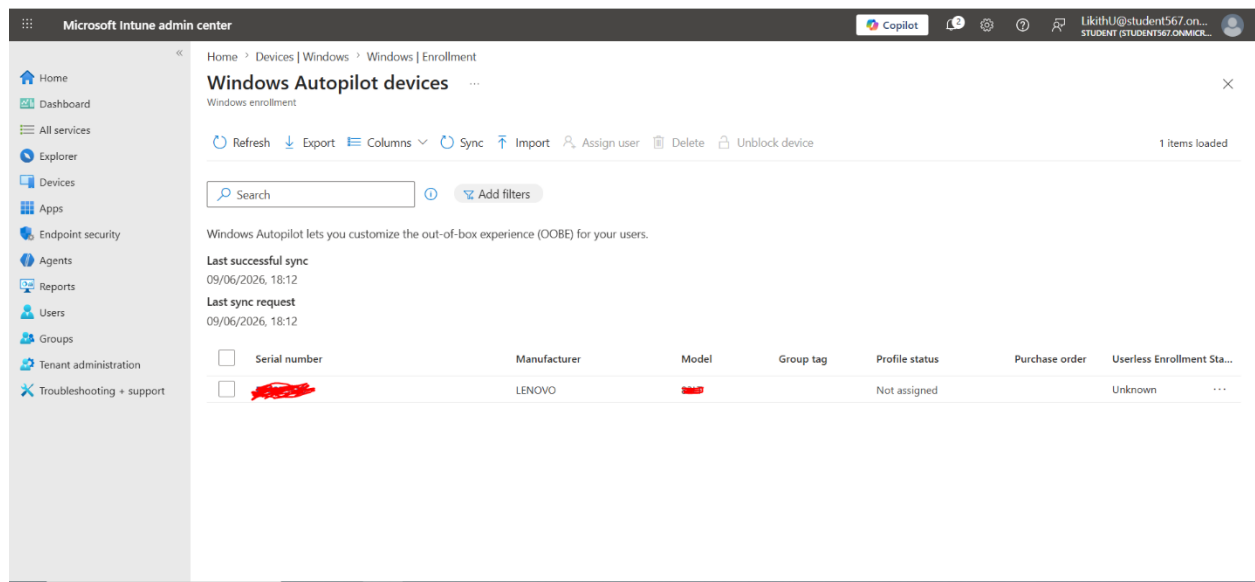

Formatting results
Total rows: 1
Rows formatted correctly: 1

Click import below to import your devices.

Import

After Importing wait 5–15 minutes. Refresh until device appears.

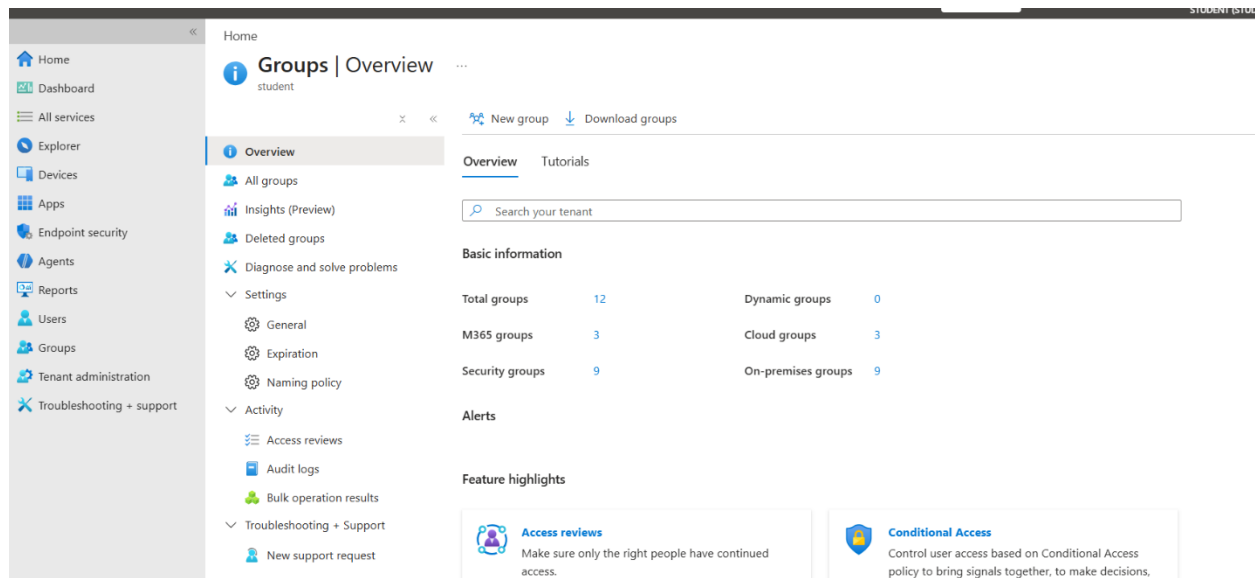

Create Autopilot Device Group

Go to Groups select new group

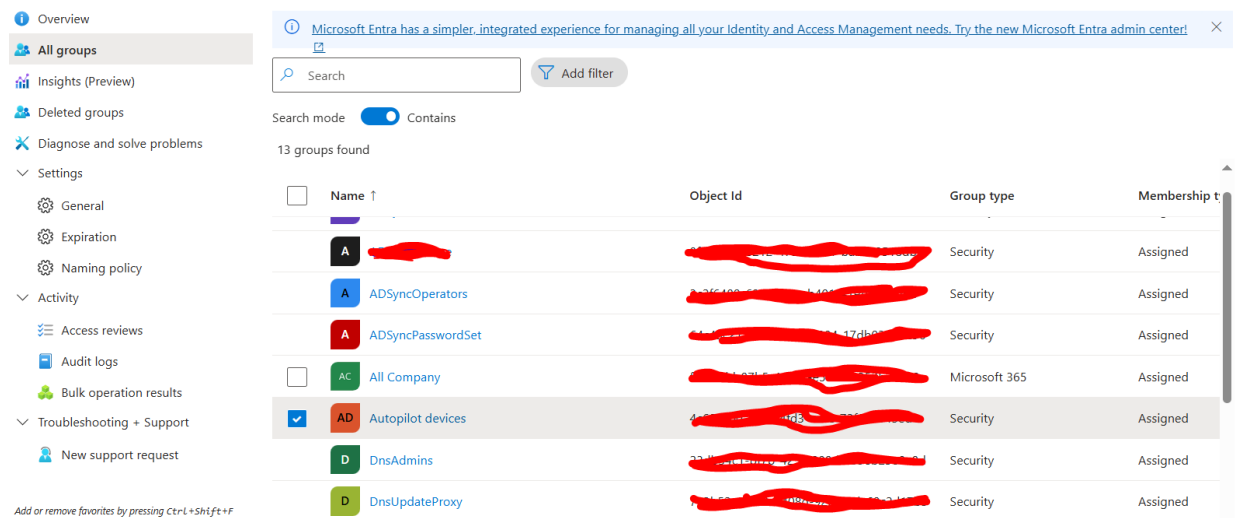

Group type: Security

Group name: Autopilot Devices

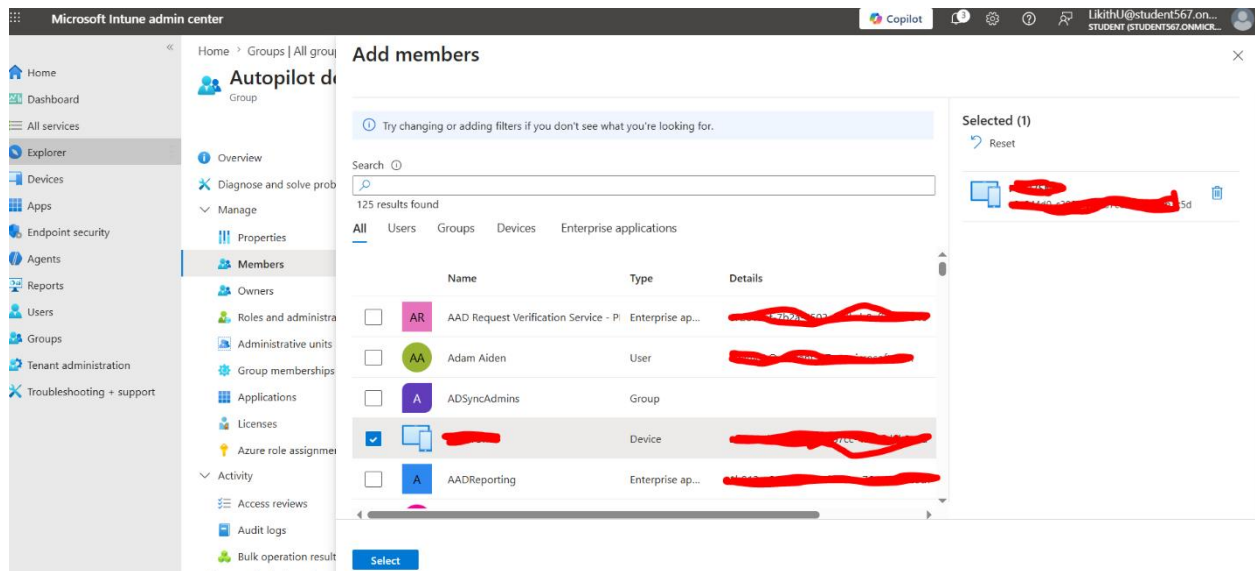

Membership type: Assigned

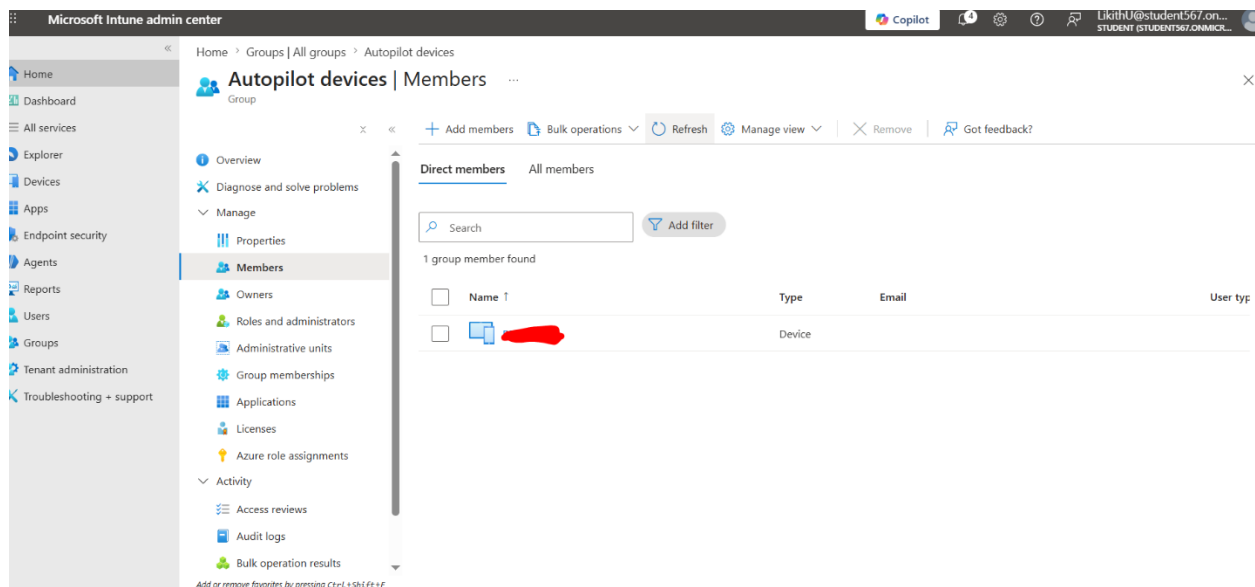

Go to All Groups and verify

Members → Add members and select the imported laptop

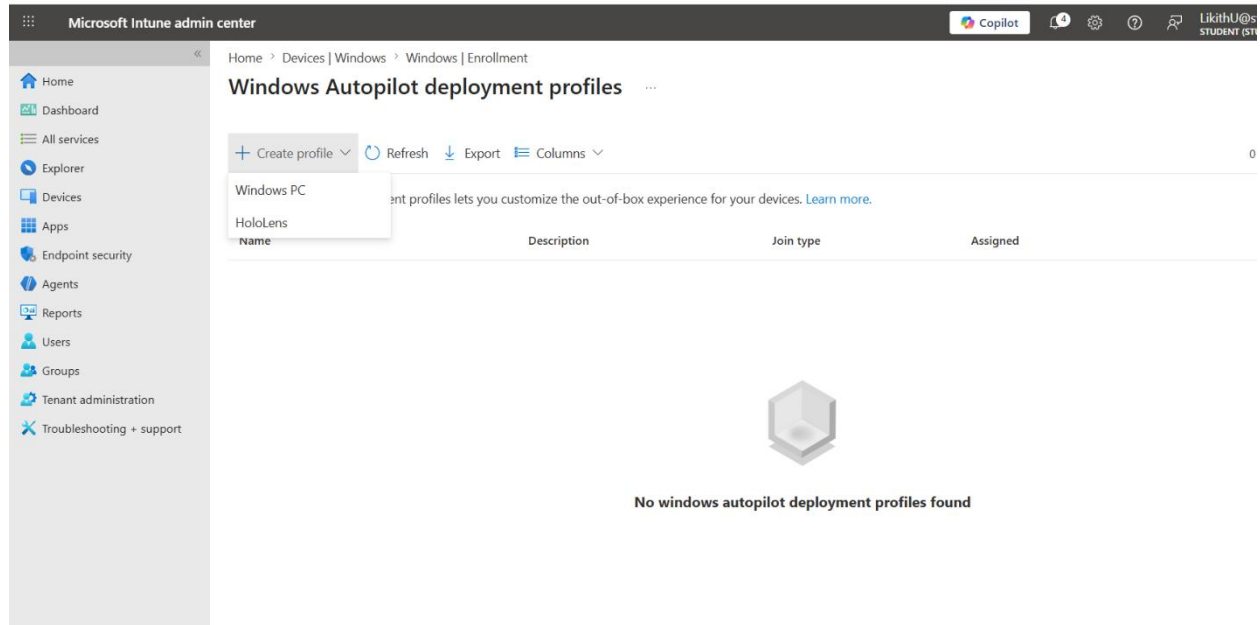

If we go to members, we can see the device

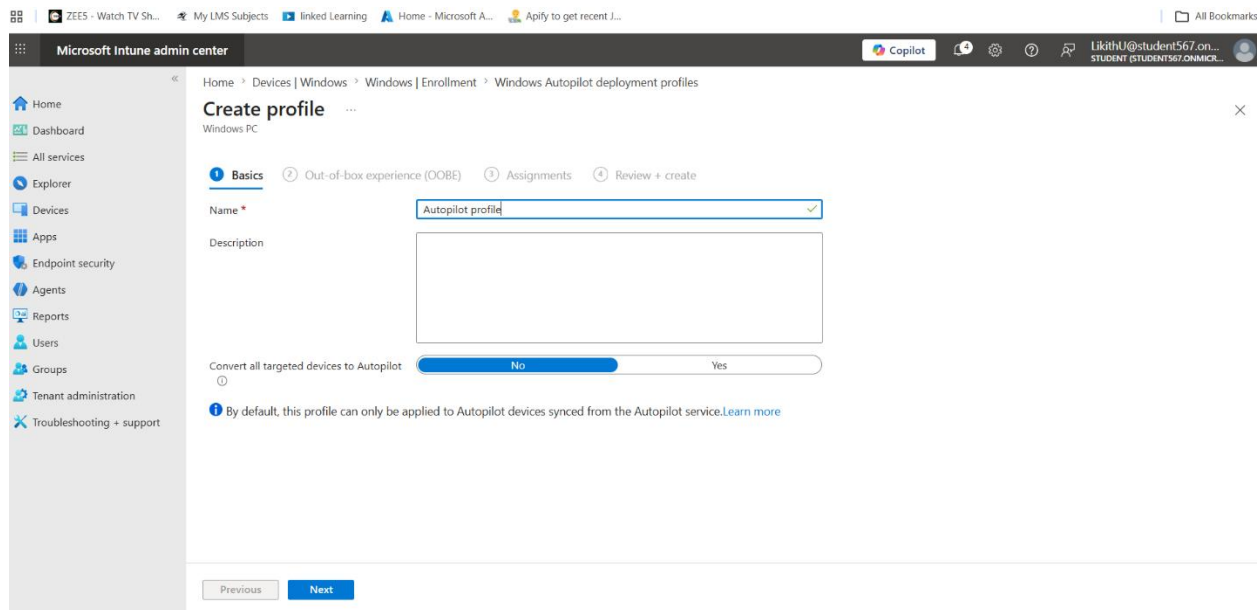

Create Autopilot Deployment Profile:

Go to Intune admin center:

Devices → Windows → Windows enrollment → Deployment profiles → Create profile → Windows PC

Create profile name autopilot profile

Add the group created

BitLocker

BitLocker

BitLocker Drive Encryption is a data protection feature that integrates with the operating system and addresses the threats of data theft or exposure from lost, stolen, or inappropriately decommissioned computers. Did you know? You can view the encryption status of all managed devices in the Encryption report (Devices - Monitor - Encryption Report). This includes status of encryption on the device, encryption readiness and any prerequisites missing or errors related to encryption on devices.

This policy applies to: Windows 10 and later

The settings in this policy can be targeted to: MDM supported devices
